CulturaGenAI Competition_Evidence v3.2

CulturaGenAI v3.2 — Competition Claims and Evidence Ledger

Claims supported by reproducible source inspection

Claim	Evidence	Safe wording
Two GitHub Pages demos	`web/academy` and `web/adaptengine`; publication workflow	"Two GitHub-ready static demonstrations."
Six curriculum modules	Canonical register, data files, teaching deck	"Six aligned responsible GenAI microcredentials (prototype)."
Four languages	Interface modules contain ms/en/zh/ta translations	"Four interface language options; translations require user testing."
Adaptive algorithms	Shared AdaptEngine code and tests	"Rule-based and provisional Bayesian Knowledge Tracing are implemented."
NADI	Offline synthetic avatar; optional protected live LLM function	"NADI offline simulated guidance; optional, unverified live integration."
39 automated checks	`npm run check` source-level test report (8 Nov 2026)	"39/39 automated source checks passed."
Secure pilot source	Supabase RLS, memberships and private Edge Function	"Secure-by-design pilot architecture; staging acceptance remains pending."
Final exam	18 server-held items across M01–M06, threshold >=80%, two attempts	"Server-side exam workflow in private pilot code (not yet production-validated)."
Completion records	Requires passed exam and six educator-approved evidence records	"Protected pilot completion record, not an accredited certificate."

Claims NOT yet supported

- Actual improvement in learner GenAI competencies, satisfaction or course-completion rates.
- Official accreditation, QR-verifiable credentials or recognition by government/professional bodies.
- Production-secure status, cross-institution isolation in live deployment, live AI safety or independent pentest.
- Benchmark capacity, demonstrated technical scalability, high availability or Technology Readiness Level 9.

- Real operational ROI, signed customers or ITEX/QS awards.

Research framing

Research gap: UNESCO competencies, human-centred design and knowledge tracing are established strands; the locally contextual CADG-informed / proposed m-DOAI workflow connecting adaptive practice, learner evidence and educator review is an *implementation for empirical evaluation*, not a universally novel or validated theory.

Meaningful educational outcome: learners should be able to articulate GenAI limitations, protect private information, verify sources, explain their ethical decisions and demonstrate iterative human–AI practice, rather than solely passing a quiz.
