CulturaGenAI User v3.2

CulturaGenAI v3.2 — User Manual and Judge Demo Guide

Release date: 8 November 2026
Products: CulturaGenAI Academy, reusable m-DOAI AdaptEngine, optional NADI companion, and the protected institutional pilot.
Status: Functional research demos and secure-pilot source; not institutionally accredited and not proven TRL 9.

Read this first

The programme uses one **official six-module curriculum (M01–M06)** across the poster, the 76-slide instructor deck, Academy lessons, protected final exam and completion record. The public GitHub Pages versions use only **synthetic data**. Do not enter real student information there. The protected pilot needs a separately configured Supabase project with invited users.

Three portals at a glance

Portal	Purpose	Needs login?	Data
`/academy/`	Explore six microcredentials, CADG/m-DOAI activities, NADI offline guidance and demo badges	No	Synthetic, browser local
`/adaptengine/`	Experiment with transparent adaptive rules and provisional Bayesian Knowledge Tracing (BKT)	No	Synthetic, browser local
`/pilot/`	Protected practice, D/O/A/I evidence, human review, server-scored exam and pilot completion records	Yes, after configuration	Institution-scoped records

A simple judge demonstration (about 5–8 minutes)

1. Open the **Academy** and show the canonical M01–M06 titles and four interface language options.
2. Open **Adaptive Practice**. Answer two or three sample questions; demonstrate how the difficulty suggestion changes under the rule-based or BKT mode.
3. Ask **NADI** to recommend practice. Explain that the public character uses deterministic offline guidance; the optional live LLM pathway exists only in the separately configured protected pilot.
4. Show a sample D/O/A/I learner reflection and educator review. Explain why **an AI does not award credentials**.
5. Open **AdaptEngine** independently to demonstrate that the adaptive component can be reused.

6. Show the certificate **sample**, clearly marked **SAMPLE ONLY — NOT ACCREDITED**, and explain the secure exam + educator approval policy.

Do not demonstrate real learner identities, claim actual learning gains, or claim TRL 9. Source-level tests (39 checks passed) are evidence of implemented code, not educational validation.

Official programme — six consistent microcredentials

All course screens, teaching slides, examination coverage and protected completion records use these identifiers and titles.

- **M01 — GenAI Foundations & Human Agency** (F01–F03)
- **M02 — Privacy, Consent & Safe AI Use** (F04–F06)
- **M03 — Academic Integrity, Disclosure & Verification** (F07–F09)
- **M04 — CADG, Bias, Culture & Inclusive AI** (F10–F12)
- **M05 — Responsible Prompting & Human–AI Iteration** (F13–F15)
- **M06 — AI Governance, Assurance & Ethical Leadership** (F16–F18)

The verified programme structure consists of six modules, recommended 2 learning hours each (12 hours total). The secure pilot has **30 practice items (five per module)** and **18 final-exam items (three per module)**; its minimum final score is **80%**, with **six educator-approved D/O/A/I submissions** also required. These counts reflect the prototype; content validity and accreditation remain pending.

A. Public demonstration (no accounts, dummy data only)

1. Open the GitHub Pages link and choose **Academy Demo**.
2. Select **English** / **Bahasa Melayu** / **Mandarin** / **Tamil** in the Academy interface.
3. Explore the six responsible GenAI microcredentials: Foundations; Privacy; Integrity; CADG / Culture; Prompting; Governance.
4. Choose **Adaptive Practice** and compare **Rule-Based** or **BKT** modes. Answer questions and inspect the next proposed difficulty.
5. Use the **NADI** avatar to request a planned practice activity in the offline demonstration. This is a bounded simulation, not a live LLM.
6. Switch to the **Educator** role in demo mode to see a simulated evidence approval and demo badge. **This is not authentication.**
7. Open **Standalone AdaptEngine** to inspect a separate reusable adaptive learning product.

Do not enter real pupil names, identification numbers, health records, passwords, unpublished research or confidential documents into either public demonstration. The original demos keep sample changes in local browser storage.

B. Secure institutional pilot (Supabase must be configured by administrator)

Sign in and choose institution

1. Open **Secure Pilot** from the landing page.
2. Enter your institutional account email and password.
3. If the screen says you are **not enrolled**, ask your administrator to create a membership. Signing in alone never gives a learner or educator role.
4. If your identity belongs to more than one institution, select the relevant institution in Dashboard.

Learner: adaptive learning

1. Select **Adaptive practice**.
2. Select one of six modules and choose **BKT** or **Rule-Based** mode.
3. Select **Get my next question**. The question appears without answer keys.
4. Answer and submit. The server checks the answer and records the result.
5. Review explanation, mastery estimate and suggested difficulty. Mastery is an **uncalibrated mathematical estimate**, not a diagnosis.
6. Continue until the module's prototype question bank is complete. Each module currently has five practice questions in the secure pilot.

Learner: m-DOAI evidence

1. Select **m-DOAI evidence** and choose your module.
2. Write at least 30 characters for each reflection:
    - **D** — learner context, inclusion, accessibility and cultural safeguards.
    - **O** — ideas explored and learning opportunities compared.
    - **A** — prompt, examine, verify, revise, apply and reflect.
    - **I** — how the human regulated GenAI, checked accuracy and assumed responsibility.
3. Record original sources checked (minimum 20 characters) and confirm both declarations.
4. Submit. The evidence is marked **pending** until reviewed by an authorised educator.
5. If an educator requests revision, improve the evidence and resubmit. An approved submission becomes locked.

Learner: final examination and completion record

1. Select **Final examination → Start**.
2. The secure pilot uses **18 server-scored questions**, three per module, with a **35-minute session** and an **80% passing threshold**.
3. Submit all questions. At most two graded submissions are permitted in the pilot.
4. A passing score **does not automatically award a certificate**. All six D/O/A/I evidence submissions must also be educator-approved.

5. Select **Check completion record eligibility**. If all requirements are satisfied, your account can display/print a protected completion record. The pilot record is **not accreditation**.
6. A partially completed exam can be resumed via **Start** while its original session remains valid.

Learner: NADI companion

1. Select **NADI agent** and choose a microcredential topic.
2. Read the privacy explanation and actively accept sending a question to the configured AI provider if one is connected.
3. Ask a short question about your learning; never include real personal data.
4. NADI reads only approved lesson summaries and your own progress indicators. It may suggest an activity, but **you decide whether to begin**.
5. NADI cannot approve work, change grades, send reports, or create certificates.

Educator: reviewing evidence

1. Sign in using an **educator/admin membership** issued by the institution, not a simulated role selector.
2. Open **Dashboard → Educator review queue**.
3. Read the learner's D/O/A/I evidence and source verification notes.
4. Enter at least 10 characters of feedback and either **Approve as educator** or **Request revision**.
5. You cannot approve your own submission. Existing approved evidence is locked and requires an administrative correction workflow if mistaken.
6. Approval records include reviewer ID, time and an audit event.

C. Accessibility and honest research use

- Use keyboard navigation, descriptive labels and a text alternative to NADI's avatar. Animation respects reduced-motion settings.
- Use private institutional accounts; public dummy statistics are **not** valid study results.
- The browser text/voice capabilities are optional. Voice is not required for any assessment.
- Actual evaluation needs consent, ethics approval where required, language review and accessibility testing.

v3.2 competition materials

- A1 poster: `competition-materials/CulturaGenAI_v3_2_Competition_Poster_A1_Landscape.pdf`.
- 76-slide PPT with speaker notes: `competition-materials/CulturaGenAI_v3_2_Instructor_Deck_Poster_Theme_76slides.pptx`.

- Sample certificate: `competition-materials/CulturaGenAI_v3_2_Sample_Completion_Certificate.pdf`.
- Current evidence and restrictions: `manuals/COMPETITION_EVIDENCE.md`.
